

ACCURACY IS CRITICAL FOR YOUR BUSINESS

SwordPoint is an Atlanta-based technology company that delivers highly secure web-based applications designed to track security, safety and environmental incidents that require response, monitoring and/or adherence to compliance and regulation. Since 2010, the company has been providing industry and institutional leaders with an innovative approach to risk management, security, and data management. With over 100 years of collective experience in law enforcement, security intelligence, software development and executive management, SwordPoint provides comprehensive insight to reduce risk and increase operational efficiency for organizations.

SWORDPOINT

TRANSFORMING MANAGEMENT OF YOUR
SECURITY, SAFETY & ENVIRONMENT

“Just a quick note to let you know how much I value the purpose-built SwordPoint database you developed for our security department. From our first conversation, you focused on understanding our business as well as our business needs. Your design team’s experience was evident, but their patience and responsiveness was amazing. They worked hard to be sure the system was user friendly. In the end, the system you developed for us allows effective oversight, communication, analysis and decision making. It is at the core of our shipboard operations and is simply fantastic. Many thanks for your great (and continuing) support!”

*Gary M. Bald
Senior Vice President and Global Chief Security Officer
Royal Caribbean Cruises, Ltd.*

SWORDPOINT

TRANSFORMING MANAGEMENT OF YOUR
SECURITY, SAFETY & ENVIRONMENT

products

- *Global Shipboard Information Management System (GSIMS)*
 - Security related incident tracking for guests and crew.
- *Safety Shipboard Information Management System (SSIMS)*
 - Personal injury related incident tracking for guests and crew.
- *Environmental Stewardship Information Management System (ESIMS)*
 - Environmental related incident tracking.
- *Port Matrix* – A digital resource guide for onboard use that outlines port regulations.
- *Actual Waste Landed* - Waste landed or discharged tracking including financial details of each transaction.
- *Refrigerant Tracking* - Inventory and usage tracking of refrigerant.

Tracking, notification, and response are critical:

- Web-based application tracks incidents in real time that require response, monitoring, and/or adherence to government compliance and regulation.
- Prioritization and notification of incidents for timely decision making and staff guidance.
- Communicate standard operating procedures for incidents.
- Track equipment use and confirm if safety policies were properly followed.
- Track, store, and prompt for victim and witness statements, photographs, CCTV footage and other valuable support materials that may be required during incident litigation.
- Create accountability ledger for managing risk at both operational and corporate levels.

Ease of use:

- Operates over wireless, cellular, and satellite connections.
- All communications are stored within the system.
- Easy customization through the use of drop-down menus.
- Access levels can be defined and assigned.
- Autopopulation of information fields by incident type.

Reporting:

- All data can be downloaded for analysis.
- Report generation and distribution for internal use and national/international government agencies.
- Instant analysis for key metrics.
